

COHORT CONSTRUCTION

provenance-first; bar width $\propto$ number of journals

1,461

Sampling frame

journals meeting fixed eligibility

Fixed eligibility — calculable subfield-normalized impact (JSS) · ISSN in the Scopus title list · sufficient content · six subfields

↓
Additionally satisfy the conditions for editorial comparison
– **940 journals**

521 **Comparable cohort**
editorial comparison

Analyses — alignment (JCA), coverage (M), position (D), and the typology.

+ 1

Analytic cohort 522

= 521 + 1 illustrative journal
*(excluded from all aggregate estimates
and from the descriptor matrix)*

Intrinsic analyses — concentration,
stability, perturbation tests.

Reported cohort sizes are properties of each run and are recorded in its manifest; no cohort size is hard-coded in the computation.
